Abstract

This article undertakes a comprehensive and critical comparative analysis of legal education systems in the United States of America, the United Kingdom (with specific reference to England and Wales), Australia, and India. The article explores the historical development, acknowledging different institutional paths while drawing on their common law history. In accumulation to enduring and increasingly important issues with equity, access, progress well-being, and proficient identity formation, the fair examination comprises curriculum design, pedagogical tactics, endorsement and regulatory contexts, proficient qualification trails, and proficiency valuation mechanisms. [1], [2] In terms of policy, the study takes a doctrinal and policy-based methodology, inspecting scholarly nonfiction, prominent court judgments, governing tools, statutory bases, and recognizing standards to create a multi-jurisdictional version of alteration that is substantial but varying. [3] The consequences expression a vibrant inclusive tendency toward competency-based edification, empirical and irrefutable learning, and the use of expertise in both instruction and assessment. These trends are driven by globalization, digitization, and fundamental changes in the legal services diligence that place a superior importance on obvious proficient awareness.

[1], [2], [4], [5]. Though, bygone inheritances, practiced values, socioeconomic background, and influential aptitude all have a noteworthy control on the system, power, and ability of application. [4] The investigation acmes the United States' resource-intensive scientific edification model; the United Kingdom's transition to centralized outcomes-based licensing through the Solicitors Qualifying Examination, which was hosted in 2021; Australia's institutionalization of obligatory Practical Legal Exercise as a vocational channel; and India's widespread, centrally regulated structure, which is founded on unified five-year programs and the three-year LL.B. route under the statutory authority of the Bar Council of India. [6], [7], [8], [9] and [10]. The article's conclusion is that no single model provides a model that is always better. Instead, it contends that the best course for legal education in the twenty-first century is long-term, context-sensitive, evidence-based reform that is guided by inter-jurisdictional conversation and reasonable learning rather than straightforward convergence. [1], [2], [11]. The scientometric and bibliographic mapping examination of the article further reflects its motivation on competency-based legal teaching, homogenous proficient certification, judicial standardization, and several improvement forms.

Comparative Legal Systems, Competency-Based Legal Education, Legal Education Reforms, Professional Licensing Examination, Regulatory Frameworks, scientometric and bibliographic mappings, Technology-Driven Legal Education.

INTRODUCTION

Introduction: Global Pressures and the Reconfiguration of Legal Education

The international scenery of legal learning is enduring rapid and fundamental revolution. For much of the twentieth century, legal training schemes across collective law dominions revealed a degree of relation steadiness, characterised by well-defined organized roles, expected professional ways, and lasting didactic beliefs. However, in the modern era, these systems face continuous and synergic

pressures that require a thorough reflection on the law school, evaluation and licensing of lawyers. It's not a moment for incremental changes but one that may require a reconfiguration of assumptions about the nature of legal knowledge, the goals of a law degree, and the skills that are required for professional practice. [12], [1], [2].

The perception of the legal profession as a primarily national business has been undermined by globalisation. In an increasingly cross-border commercial landscape, lawyers are expected to not only be doctrinally sophisticated, but also comparative, culturally astute, and institutionally and jurisdictionally agile in order to interpret and apply foreign

laws, engage in international arbitration, and participate in transnational regulatory regimes, as well as in comparative constitutional and human rights litigation. [1], [2], [13]. At the same time, technological change, and the swift progress of artificial intelligence, data analytics and legal technology platforms, has revolutionized how law is worked. The use of technology is increasingly replacing work traditionally carried out by junior lawyers, such as document review, basic legal research, and standardised drafting, and is creating an increasing focus on judgment, ethical reasoning, strategic problem solving and client interaction in the technology mediated context [5], [14], [15].

These difficulties are made worse by economic pressures. It is less likely that employers will cover additional training beyond the qualification, and in all countries, students of the law face rising tuition and debt. Governments and regulators, in turn, expect professional regulators and higher education institutions to be clearly accountable and to deliver public value. Together these factors generate a global need for legal education that is demanding and obviously practice-relevant, socially engaged and professionally viable [3].

For purposes of this article, four major common law jurisdictions are identified: the United States, England and Wales, Australia and India. Although all the jurisdictions share a common theological legacy, they react to these influences in different ways, including their institutional structures and their reform journeys. The central theme of this article is how these are transforming legal education to meet the twenty-first century's needs and what can be gleaned from their successes, limitations, and experiments [1], [2].

EVOLUTION OF LEGAL EDUCATION IN COMMON LAW SYSTEMS

In common law countries, university-based education for law replaced apprenticeship programs where the apprentices were under the control of professionals. In England, early education in law was primarily practical, and the formal study of law was not nearly as significant as being mentored, observed, and absorbed into the professional culture, particularly at the Inns of Court. Legal knowledge was imparted through experience rather than theory and was embedded in practice [16].

One of the major changes in the institution was the transfer of legal education to Universities. In 1870, Christopher Columbus Langdell became dean of Harvard Law School, which effectively signaled a shift in this direction. Langdell's philosophy of law being a "science" which can be methodically learned from appellate decisions was the source of the case method and the Socratic classroom. This pedagogic innovation was a major transformation of the legal education system in common law countries and superseded the lecture-based system of training [17], [18] and [19].

In the twentieth century, the Langdellian formalism came under growing criticism from the Legal Realist movement. Other scholars like Karl Llewellyn challenged the idea of law as a closed logical system in favor of a more holistic approach

that incorporates the social, political and institutional nature of legal decisions. Legal Realism legitimized interdisciplinary research and made power issues and inequalities, and the distance between law in books and law in action, central [20], [21].

Another major leap forward in education was the development of clinical legal education beginning in the 1960s. Measures were taken to bridge the gap between theory and practice: clinical programs included supervised real-client work and emphasized skill development while simultaneously addressing ethical issues and social justice issues. Nowadays, clinical education has become an important, but not widely distributed form of legal training, particularly in the United States and Australia. It remains one of today's most important advances in legal pedagogy [22], [23] and [24].

COMPARATIVE ANALYSIS OF LEGAL EDUCATION MODELS

(i) United States

The system of legal education in the United States is mostly graduate-entry. Typically, undergraduate degrees are required, and a three-year Juris Doctor program is required to attend law school. In most jurisdictions the American Bar Association is the chief gatekeeper and accreditation and eligibility for bar admission are heavily impacted [6].

The first year curriculum is usually doctrinal and case oriented, with the case method and Socratic dialogue influencing it. Later courses allow for more flexibility in terms of journals, moot court, externships, simulations, and clinical programmes. American clinical education is one of the most advanced in the world, providing a great deal of experiential learning, but access to it is heavily resource-dependent and is unevenly distributed among institutions [23], [25].

Continued concerns are the increasing cost of tuition, student debt, and the perceived value of education, especially of the third year of study. Admission to the bar is still state based, but 10% of the population is now admitted by virtue of having taken the Uniform Bar Examination [26]. The NextGen initiative of the National Conference of Bar Examiners is expected to bring further reform, and will be phased in over time starting in 2026 [27].

(ii) United Kingdom (England and Wales)

In England and Wales, there is a dual legal system of both solicitors and barristers. The solicitor pathway has been transformed with the launch of the Solicitors Qualifying Examination in 2021. The Solicitors Regulation Authority (SRA) regulates the entry to the profession of solicitors. The SRA is responsible for the regulation of entry to the profession of solicitors [7], [28].

This is a model that deals with centralised, outcomes focused assessment and flexible progression with education and work experience. The SQE is a welcome development for the opportunities it could provide to increase access, but it

has brought with it concerns about the differential access to preparation resources, differential training pathways, and the quality of training work experience [29], [30].

The barrister pathway is still based on a combination of academic study and vocational training and pupillage, which is governed by the Bar Standards Board. The offer of limited pupillage remains a key constraint, and is continuing to further the overarching issue of access and diversity in the profession [31], [32].

(iii) Australia

Australia has both undergraduate and postgraduate entry to the legal profession. One key aspect of the Australian legal system is the requirement for Practical Legal Training to be completed after academic training. The aim of PLT is not to be an optional add on, but to provide the necessary baseline professional skills before entry, and to provide a vocational bridge for everyone [8], [33].

The admission procedures are carried out by the state and territory-level administrations under a nationally coordinated framework, but academic eligibility is based on a framework of defined study areas, or the Priestley Eleven. Australia's focus on required PLT is an intentional move to place the system between the American model and the English model, aiming to balance the two models and deliver both structured skills training and doctrinal instruction [34], [35].

(iv) India

India has the world's largest, most complicated and institutionally diverse system of law education. As opposed to market-driven or institutionally decentralised model that are adopted in some other common law jurisdictions, India has a model that is more centralised and is governed by the statutory powers of the Bar Council of India under the Advocates Act, 1961. The legal education system in India is not an academic system only, but is a part of professional regulation that is directly tied to enrolment, licensure, continued practice and scope of the right to practice [9], [10], [36].

Academic Structure and Entry Pathways

Indian legal education can be pursued in two main streams. The first is an undergraduate programme linked to the three-year LL.B. programme. The second is a five-year integrated (law and other disciplines such as arts, business, science and social science) law programme that is taken up straight after secondary school. The integrated model is a unique addition to international legal education, and has developed a strong emphasis from its early beginnings, an interdisciplinary base, and sustained engagement with legal studies [37], [38].

An important turning point in reform was the creation of National Law Universities in the late 1980s. These institutions have introduced structured curricula, consistent assessment, compulsory clinical training and national-level competition for admissions, thereby enhancing the

educational and teaching quality. At the same time, there are many Centers of Legal Education associated with public and private institutions of higher education in India, which constitute the legal education ecosystem.

Most of these institutions are facing serious constraints of infrastructure, faculty and resources. Thus, the quality variation in India is not incremental and is not reflected at the level of other jurisdictions in this study [39], [40].

Centralised Regulation and the Role of the Bar Council of India

The Bar Council of India has been vested with regulatory powers on legal education by Sections [14] and [11] of Advocates Act, 1961 with the Rules of Legal Education made thereunder. This regulatory competence is related to the imposition of minimum requirements for infrastructure, faculty skills, curriculum content, teaching hours, clinical courses, inspection systems and compliance regimes. The Bar Council of India unlike the accreditation bodies in other jurisdictions like the United States or Australia carries out both education regulation as well as professional governance, performing functions that are separated apart in different institutions in these other jurisdictions [9], [10].

This is based on the normative idea that the quality, expertise, and ethics of the profession are directly shaped by the educational experience of the lawyers. But the number of schools and pupils is so large that there is a strain on resources available for regulation and enforcement is uneven, and it is particularly challenging to implement reforms [39], [40].

Equivalence of Foreign Law Degrees and Recognition of Foreign Qualifications in India

One peculiar aspect of the educational system in India and the ways in which foreign legal education is recognised for admission to the bar in India involves the employment of foreign legal education acquired by Indian citizens. The United States, England and Wales, and Australia typically approach the issue of foreign degrees via university admissions or professional conversion programs; in India, this problem is dealt with under a regulatory system with the Bar Council of India. This regime aims to ensure that the foreign qualifications fulfil the minimal structural and substantive requirements of Indian legal education and parity is ensured between the domestic and foreign graduates [9], [41].

The central principle underlying the equivalence approach of Bar Council of India is that it is based on the studied pattern of legal education in India, which is generally either secondary education plus first degree plus three-year LL.B or secondary education plus five-year integrated law programme. When the Foundation of the LL.B. programme in the foreign country is not based on the structural baseline expectations, the Bar Council of India has asked for identified academic deficiencies to be addressed through the prescribed bridging mechanism before the candidate is eligible for enrolment [41].

In practice, the equivalence approach has been developed on the premise that recognition does not exist solely in a formal sense.

In reality, the equivalency framework has been based on the understanding of recognition as a substantive process of duration, entry criteria, curriculum content, and institutional status, instead of a formal process of degree titles. Hence, foreign qualifications may be required by the Bar Council of India through a bridge course, an additional year and/or two years of structured legal study or by other official academic means in order to achieve the structural parity.

The institutionalization of academic bridging is a development in regulatory technique. Existing equivalence arrangements for apprenticeships were gradually phased out as they faced problems in verification, monitoring and enforcement and were superseded by institutionally verifiable academic study as a more reliable instrument of standardisation and accountability [41].

Foreign post-graduate qualifications can also be used in the equivalence approach. The Bar Council of India have issued guidelines that makes the LL.M. a degree that should only be taken after a recognised or properly equated LLB degree. This is designed to safeguard the academic integrity of the post-graduate specialisation and to prevent the enrolment of students in post-graduate study of law without a law degree, which meets the regulatory pattern in India. In this regard, equivalence also serves as a quality assurance mechanism for the legal academic pipeline, which is not intended to serve as a screening mechanism for professional practice. In this sense, equivalence is not a screening mechanism for professional practice, but a quality assurance mechanism for the legal academic pipeline [41].

One of the important elements of the framework is verification. In order to ensure the integrity of the regulatory process and to reduce the risk of non-comparable or false qualifications, the Bar Council of India has mandated that foreign qualifications be attested through regular institutional channels, instead of unofficial channels. The system aims at being fair to graduates of Indian institutions where the practice of law is closely regulated, while also balancing the protection of local professional norms and standards with the promotion of international legal education by formalizing equivalency processes [41].

The equivalency concept of regulation in legal education is illustrated by the Indian system of equivalency which recognizes academic paths, professional licensing, continuous certification, and foreign qualifications as part of a single regulatory process, not four separate administrative spheres. This is important because in a legal services market where the definition and scope of legal practice (and non-litigious legal practice) are broadly defined and governed by a central professional body, it seeks to strike a balance between transnational educational mobility and national professional regulation [9], [41].

Enrolment, Provisional Practice, and the All India Bar Examination

Professional access in India is in two phases. An Advocate is a person who has obtained a recognized LL.B. degree and has enrolled with a State Bar Council as a graduate. Enrollment is the first step towards temporarily becoming a lawyer in India with a view to practicing anywhere in the country after the relevant legal issues are satisfied. [9].

The All India Bar Examination has been made as a competency test after the completion of enrolment under All India Bar Examination Rules, 2010. The Bar Council of India in Circular No. 4 of 2013 dated 12th April 2013 has directed that the exam shall be conducted for the advocates who obtained their LL.B. degree during 2009-2010 and registered as advocates from 12th June, 2010. To become a practicing lawyer and to get a certificate of practice, one has to appear in All India Bar Examination. [42], [43].

The advocates who have not appeared in All India Bar Examination within the stipulated period may have the right to practice their profession provisionally with conditions imposed by the Bar Council of India. Such advocates must give an undertaking in an affidavit on non-judicial stamp paper (on a stamp paper of the specified denomination) that they shall pass the examination within two years from the date of their enrolment or within such period as may be applicable, and shall not practise in any court of India until they are qualified. The rules also mandate that enrolment details, provisional certificates, provisional identity cards and validity periods be disclosed, thus tying professionalism to exam compliance [42], [43].

The Supreme Court of India in *Bar Council of India v. Bonnie Foi Law College* propitiously reviewed the constitutionality and the legality of this post-enrolment competency framework. The Court confirmed that the Bar Council of India had the authority to set pre- and post-enrolment requirements for admission and practice in the legal profession. If Sections [14], [7], [32], [35] and [11] of the Advocates Act are read as a whole, they do not create an absolute right or entitlement to practice law upon enrolment, the Court found [44], [9].

Most importantly, the Court stated that the right to practice under the Advocates Act Section [35] is regulated by lawful and necessary conditions in the public interest. The All-India Bar Examination was accorded constitutional sanction as a proper tool to achieve minimum professional competence, especially in a system that has a great disparity of institutional structures.

The Court noted that the exam is not based on quotas, does not discriminate against candidates, and does not limit test takers to how many times they can take the exam. Consequently, the *Bonnie Foi* ruling places the legal education and licensing regime of India in a regulatory structure of a regime that sees a legal competence as an evergreen requirement and not an academic achievement [44].

Certificate of Practice and Verification of Active Practice

The continuation of practice is further regulated by the Certificate of Practice and Place of Practice (Verification)

Rules 2015. All advocates whose names are on the State Roll are to apply for the verification of the Certificate of Practice every 5 years, or at least 6 months before the Certificate of Practice is due for expiry of its validity or the last verification. The Certificate of Practice granted on the basis of All India Bar Examination or on the basis of 2015 Rules is limited to a period of five years [45].

The advocates have to submit verification forms along with documentary evidence for active practice such as Vakalatnamas, cause lists, pleadings or any recognised indications of practice. Senior Advocates and advocates in categories specified in this section must file a declaration of active practice. If the advocate fails to submit verification or declaration within the prescribed time, this may lead to being treated as a non-practising advocate and loss of voting rights in Bar Council / Bar Association elections and ineligibility for welfare schemes and professional benefits [45], [46].

This framework for verification of legal education, legal examination, legal enrolment, and ongoing engagement with the legal profession situates the legal profession within a continuous regulatory framework that supports the understanding of legal practice as a regulated public profession, not a private profession [45].

Scope of Legal Practice and Regulatory Jurisdiction

It is further bolstered by the wide definition of legal practice by the Supreme Court in *Bar Council of India v. A.K. Balaji*. The Court in this decision concluded that the practice of law is not limited to courtroom advocacy but encompasses non-litigation legal activities such as advisory, transactional drafting, legal opinions and any other professional legal assistance [47].

The Court also held that the Bar Council of India has regulatory powers over persons, businesses, partnerships, companies and organised units like legal process outsourcing units or business process outsourcing that undertake legal services. This interpretation significantly expands the concept of the legal service and the regulatory framework of practice in the context of a modern legal services market in which lawyers engage in litigation, business, regulatory, and global practices [47].

In the *A.K. Balaji* judgement, it has been reiterated that there is a normative justification for a central guidance on legal education, legal certification and the continuous legal certification as it recognises scope of legal activity. If legal practice extends beyond that of appearing in court, then the concept of competence must be regulated not only with regard to the ethical aspect of legal work, but also with regard to the advisory aspect and professional responsibility. This body of case law provides good constitutional and policy support for the All India Bar Examination, Certificate of Practice system, and the Bar Council of India's integrated regulatory role [47].

Persistent Challenges and Reform Trajectories

Despite the rich statutory and regulatory framework, there are a lot of structural issues in India's legal education system

[48]. Systemic and wide quality variation between institutions is the most persistent. Academic, clinical and interdisciplinary training are legally mandated at elite institutions while many law colleges face the problem of inadequate faculty, lack of research culture, lack of clinical exposure and lack of institutional governance [39], [40].

The focus on interdisciplinarity, skill development, flexibility and quality assurance is once again gaining momentum at the higher education level because of various policy initiatives in recent times, such as the National Education Policy 2020. The legal education implications of these reforms are opportunities to improve the curricular design, improve meaningful uses of technology, improve faculty development, and rationalize regulatory oversight. Implementation is not consistent and is not fully integrated, however, and effective reform will require continued coordination between universities, professional regulators and the legal profession [49], [5].

While the National Education Policy, 2020 has been mentioned in the recent discussions on the reforms in the legal education, the legal field has been specifically excluded. Under this, legal education will continue to be regulated by the existing framework of the Advocates Act, 1961, under the aegis of the Bar Council of India instead of a general higher education regulator like the University Grants Commission or the All-India Council of Technical Education, as was proposed in the NEP clause 18.3. The Supreme Court in *G.S. Mani v. Government of Tamil Nadu* has affirmed the non binding nature of the NEP and noted that the NEP is a policy vision document and cannot be given precedence over statutory regimes enacted by the Parliament [50].

This statutory status was even noticed before the NEP in the inter-regulatory consultations in the month of October 2016, when the subject of LL.M. equivalence was directly discussed at a meeting convened with the Bar Council of India, the University Grants Commission and the All-India Council for Technical Education, and the Ministry of Human Resource Development. Simply calling an LL.M. degree by its name or merely joining it to a relevant university does not make it equivalent, it must be substantively evaluated in relation to the substance of duration, curriculum and rigour, especially in the context of its being a degree which qualifies for teaching law. These deliberations indicate that LL.M. equivalence is part of a continuum of regulatory processes linked to the profession under the Bar Council of India which are not driven by generic policies of the higher education system [41].

The Legal education system in India is therefore a one-of-a-kind experiment in regulation. It is a single system of professional regulation, enrollment, competency certification, academic credentialing and verification of active practice. While this paradigm offers tools to tackle systemic quality gaps at scale, these must be complemented with institutional investment, regulatory capacity, procedural clarity and continuous evidence-based improvement in the

long-term [9], [10].

COMPARATIVE INSIGHTS AND REFORM TRAJECTORIES

A common trend in legal education reform across jurisdictions is the development of professional identities, experiential learning, and quantifiable competencies. However, outcomes are shaped differently by variations in

institutional capacity, regulation design, and socioeconomic circumstance. Although quality assurance is still a major concern, India's integrated and centrally regulated framework shows contextual adaptability at scale, Australia's PLT offers structured vocational coherence, the US model offers depth but at a high cost, and the UK's SQE represents bold centralization with equity risks [27], [29], [33], [39].

COMPARATIVE OVERVIEW

Table 1: Comparative analysis of the dimensions for different countries

Dimensions	United States	United Kingdom (England & Wales)	Australia	India
Entry Model	Graduate-entry Juris Doctor (JD) following undergraduate degree	Undergraduate LL.B. or non-law degree with conversion; SQE-based entry	Undergraduate LL.B. and postgraduate JD	Five-year integrated LL.B. after secondary education; three-year LL.B. after graduation
Accreditation / Regulation	American Bar Association accreditation; state bar authorities control admission [6]	Solicitors Regulation Authority (solicitors); Bar Standards Board (barristers) [7], [31]	State and territory admitting authorities operating within nationally coordinated standards [33]	Bar Council of India with State Bar Councils; combined educational and professional regulation [9], [10]
Clinical / Experiential Education	Strong and institutionalised but highly resource-dependent [23], [25]	Qualifying Work Experience (QWE) central; quality and access vary [7], [29]	Practical Legal Training (PLT) mandatory for all entrants [33]	Uneven across institutions; comparatively stronger in National Law Universities, reputed Centres of Legal Education [38], [39]
Vocational / Licensing Pathway	State bar examination; increasing portability via Uniform Bar Examination; further reform through NextGen licensing [26], [27]	Centralised outcomes-based assessment via SQE (SQE1 & SQE2) plus QWE / pupillage [7], [28], [29]	Completion of prescribed academic subjects (Priestley Eleven) followed by mandatory PLT [35], [8], [33]	Enrolment with State Bar Council (provisional practice) followed by All India Bar Examination and Certificate of Practice for continuation [9], [42], [43], [45]
Treatment of Foreign Law Degrees	Evaluated mainly through state bar eligibility and institutional discretion	Conversion routes and SQE permit multiple entry pathways [7], [29]	Assessed by admitting authorities with prescribed academic equivalence [33]	Centrally regulated equivalence framework under Bar Council of India, requiring structural and curricular parity and prescribed academic bridging where necessary [9], [41]
Continuing Regulation of Practice	Limited post-admission competence review; CLE requirements vary by state [26]	Ongoing professional obligations; no central re-certification [32]	Continuing professional development obligations	Mandatory verification of Certificate of Practice every five years; linkage to voting rights and welfare benefits [45], [46]
Equity and Access	High cost and student debt remain major concerns [3]	Potential widening of access, but emerging two-tier preparation risks	Regional variation in access and institutional capacity [34]	Large-scale systemic disparity across institutions [38], [39]

Dimensions	United States	United Kingdom (England & Wales)	Australia	India
		[29], [30]		
Reform Orientation	Skills-focused licensing reform and reconsideration of bar admission [27]	Centralised assessment and flexibility in pathways [7], [29]	Structured vocational coherence through PLT [33]	Scale-sensitive quality assurance, competency certification, and professional standardisation [9], [10], [38]

Globalization, technology advancements, and the need for observable professional preparedness are all contributing factors to the ongoing evolution of legal education in the US, England and Wales, Australia, and India. No single model provides an all-encompassing solution. Enrollment, competency certification, scope of practice, and qualification equivalency are all integrated into a single regulatory framework in India, which is a unique approach. Fostering context-sensitive, evidence-based reform that maintains academic integrity while preparing graduates for changing professional realities—supported by ongoing inter-jurisdictional dialogue rather than oversimplified convergence towards a single global standard—remains a persistent challenge across jurisdictions [1], [2], [5], [11].

SCIENTOMETRIC MAPPING ANALYSIS

Based on the current study paper, this report offers bibliometric visualization analysis and scientometric mapping. Heat maps, word cloud representations, thematic mapping, citation-related visualization, keyword frequency analysis, and graphical interpretation of the main study fields are all included in the investigation.

Figure 1. Top Keyword Frequency Analysis

This bar diagram represents the most frequently occurring keywords identified in the manuscript. The chart highlights major research concentrations including competency assessment, reform pathways, professional regulation, and licensing mechanisms.

Figure 2. Keyword Distribution Pie Chart

The pie chart illustrates the proportional distribution of the dominant keywords across the manuscript. The results indicate substantial emphasis on comparative legal systems, regulatory frameworks, and competency-based reforms.
